UMaine students provide music mentorship for middle schoolers

November 7, 2020

COVID-19 restrictions in Maine’s K-12 schools have transformed the way that teaching looks — particularly for the state’s many music programs. With students unable to play their instruments together in person, music educators have had to get creative to teach their students techniques from home.

That’s why Philip Edelman, assistant professor of music education at the University of Maine, and Shianne Priest, director of music, created a Middle School Mentorship Program for middle schoolers.

The collaboration begins with each music education student indicating availability to Priest and Leonard Middle School parents; interested parents then contact each student for lessons. The pilot program is beginning its third month, with most of the UMaine students acting as online music mentors for up to three students.

Each week, the UMaine students deliver their half-hour or one-hour lessons via Zoom. After each lesson, the UMaine student completes an online reflection that identifies successes and challenges in each session, providing perspective on their own practice as a teacher-in-training, giving Edelman, Priest, and the students themselves the chance to consider trends over time, develop skills, and follow up on issues.

Selected sessions also are recorded so that Edelman can offer feedback on students’ teaching practice and technique.

The collaboration is a natural fit, Edelman says. Under COVID-19 restrictions, the middle school students can’t play their instruments together in person; UMaine music education students, in turn, aren’t able to conduct the lab ensemble component of their classes, which would normally form a central part of their music teacher preparation program in non-pandemic conditions. Many music education students also were worried about opportunities for student teaching in a pandemic.

So far, Edelman says, the program has been a great success. “It’s a win-win for the middle school students during a time when music could be a real drag.”

“We can talk about theories of teaching until we’re blue in the face, but until they actually sit down with a seventh-grade and say, ‘Hey, you can push this button on your trumpet to make that note, you know, it’s impractical,’ added Edelman.

Music education major Jacob LaMontagne, a sophomore in Edelman’s MUE 210 class, agrees. “The best part of this opportunity and I’m proud to be a part of it,” he says.

Priest says the university students are making it fun for the middle school students “during a time when music could be a real drag.”

Megan Howell of Mount Desert, a double major in music education and flute performance, adds that she couldn’t have asked for better students.

“Howell, like LaMontagne, is thankful for the hands on experience that she was worried the pandemic might have precluded, and for the chance to develop skills in a mode of instruction that will likely become increasingly common in the future.

Edelman says the pilot program has been invaluable for him as a music educator; students’ reflections and recorded lessons have prodded him to consider his own curriculum and his own pedagogy. In studying students’ teaching, Edelman can examine the specific kinds of situations — technical and pedagogical — that arise.

“Reviewing students’ lessons and their reflections is a great chance to challenge my own assumptions and ask what’s really important to cover in the classroom as we help our students become effective music teachers down the road,” he says.

That tight collaboration between UMaine and Leonard Middle School continues through the fall, but Edelman hopes to see it continue into the new year and beyond if all goes well, he would like to see it expanded to other schools and made a permanent part of UMaine music education.
