Greely Institute.

I hereby certify that I have examined the foregoing accounts,
and found them correctly cast and properly vouched.

FRANK W. BLANCHARD, AUDITOR.

SCHOOL REPORT.

The close of the fiscal and school year is a time when it becomes, not only the privilege, but the urgent duty of every citizen to inquire carefully into the condition and standing of the schools; to learn what measure of success has attended the work of the teachers; and to ascertain what causes may be hindering their efficiency and successful progress. We shall endeavor to place before you a clear and brief statement of the condition of the schools as we found them, and as they are, so that all may enter upon the new year with a clear conception of their needs and prospects, and thus be able to act understandingly with reference to their future success.

On the first day of April, 1877, there were in the town 570 scholars between the ages of four and twenty-one, an increase of five on previous year. Of this number nearly one-third have not attended any school during the year, and the average attendance has been less than one-half, or about eight per cent. less than the State average. Let parents remember, that absence and tardiness are the bane of our schools, and the remedy is in their own hands.

We will not enter into detail respecting the particular merit or demerit of each school, but rather give a general outline of the whole.

The amount of money—from all sources—appropriated for our common schools the past year, was \$2,354 33. This was apportioned to the several districts as follows:—

No. Dist.	Schol.	Per cent.	Total.	No. Dist.	Schol.	Per cent.	Total.
1	30	\$55 00	\$156 40	7	43	\$55 00	\$200 34
2	60	50 00	252 80	8	106		358 28
3	78		263 64	9	124		419 12
4	42	63 00	204 96	11	8	50 78	77 82
6	45	55 95	208 05	12	6		20 28
6	4	38 00	51 52	13	24	60 00	141 12

We did not know, till after the money was apportioned, that there was a family with several children on Hope Island, so no provision was made for them, but we trust they will be remembered in future.

The average length of the Summer schools was nine weeks, all taught by females. The average wages being about eight dollars per week, including board; those on the Island receiving about two dollars per week more than those on the Main. The Summer and Fall terms of both schools on the Island were successful. The average of the Winter schools has been about eleven weeks. Three male teachers have been employed, and we think, to good advantage.

There has been no change of text-books during the year, but a change of readers in some of the districts might, perhaps, be made with profit. Here it may not be amiss to say a few words with reference to this important branch of education. Every teacher should be especially ambitious to have his pupils learn to read well. They should be carefully and thoroughly taught the elementary sounds of the language, and how they are made; also to give every syllable a clear and distinct pronunciation. They should fully understand what they read, and be taught to read understandingly. Let teachers remember, that to be a good reader, is important, and requires a quick perception of the *meaning*, as well as proper enunciation of the words. Spelling should also have an important place in all our schools; bad spelling is worse than bad penmanship. Geography—This has been sadly neglected in some of our schools. It is especially adapted to young minds, and its study should be encouraged by both parents and teacher. Map drawing, which has been practiced in a few of the schools, is well adapted to make this study interesting and profitable.

Writing should receive more attention in our schools. To be able to write well, is not only an accomplishment, but a very practical and paying branch of education.

Arithmetic—Let a large share of this study, by all means, be mental. It is used every day of one's life, and should be made practical, and never confined to the book. The teacher

should understand it so well that he could teach it if every text-book was removed from the school-room. It should be taught by principles, rather than by rules and facts. Algebra and Geometry also are essential studies, and can often be pursued with profit even in our common-schools.

Grammar — Perhaps there is no single branch in which our teachers so generally fail as in that of Grammar. To teach this successfully, it must be done to a great extent, orally, and from the board. This is especially true of young pupils and beginners. If taught orally, the teacher may make what, at first seems dry and uninteresting, both *interesting* and pleasant.

We have thus far spoken of practical studies ; not that we would exclude all others, but the want of practical knowledge, not only among our scholars, but with our teachers, has been sadly apparent. Our boys and girls, who must soon act for themselves, need something more than a mere knowledge of text-books, to make them successful in life. Good tools are as necessary for the school-room, as for the mechanic or farmer. Every school should be supplied, not only with suitable text-books, but with plenty of black-boards, outline maps, Globe, and a copy of Webster's Unabridged Dictionary.

The school-room should receive careful attention. It should be kept neat, and made to look cheerful and attractive. Some of our school-houses are in bad condition, and I would kindly remind parents, that, if they send their children to a dirty, neglected, unpleasant school room, they will be sure to develop habits of carelessness and inattention. A few dollars expended in paper and paint will often do much to help make a successful school.

We would say to our island friends, that while we commend them for their manifest interest in their schools, it seems to us that the system of grading in District No. 9 might be changed with profit. We have sometimes thought that if the two districts were united, having their Summer schools as they *now* do, at each end of the Island, and their Fall and Winter terms in a good building near the center, it would give them privileges equal to almost any free high school in the State.

Parents and Teachers! The future prosperity of this country and the happiness of its citizens rest upon you. It is yours to solve the great problem,—“What the nation shall be, in its growth, intelligence and morals.” Remember that teaching is an art, requiring both natural and acquired skill of no ordinary kind. The training of the human mind is the *noblest* as well as the most *important* work in which man or woman can engage. There is so large amount of detail in the method and material of instruction, that it requires the most careful training to fit one to be an efficient teacher. For this and other reasons, Normal schools are indispensable; and as we are to have one so near as Gorham, we would kindly advise our teachers to avail themselves of its advantages, or give up the business.

In conclusion we would say, let us work together. In no case let the teacher be fully engaged without consulting the Supervisor. And let us not forget that we have, in our *own* town, a school, free to every child between the ages of twelve and twenty-one, that *ought* to be better than a thousand dollars to any one who will avail himself of its advantages.

Particular reports of any school will be given in Ton-11-meeting if requested.

Respectfully submitted,

E. K. SWEETSER, SUPERVISOR OF SCHOOLS.
