3 UMO students win in Del Monte contest
by Doug Ireland
Staff Writer

Three UMO students will receive a combined total of $500 to prize money as winners of a sweepstakes sponsored by a nationally known food company with headquarters in San Francisco. The contest, according to the University Bookstore, the bookstore's manager, said. indicated that the contest will run from the first day of January until March 1. the bookstore's manager said. The contest, sponsored by Del Monte Foods, Inc.. is expected to break up due to its second prize of $150. The winners will receive their cash prizes in the mail full week from Guaranteed Sales Inc.. of East Brunswick, N.J.. said.

Colle said he was walking in the bookstore one day last month when he noticed a sweepstakes advertisement on the wall near the entrance. Within a few minutes, he filled out a form and became one of approximately 2,000 contestantes to enter the sweepstakes. "I couldn't believe they were giving away all this money at the same time," Colle said. "I thought, why not enter?"

Colle said anyone who entered the sweepstakes must fill out one entry form per contestant. On Tuesday, the winners will be announced in the Student Union. The prizes will also be presented on Thursday night at 8 p.m., in the Pavilion Theatre. The winners will be announced in the Student Union. The winners will be presented in the Pavilion Theatre.

WMEB to promote local music
by Maureen Montig Staff Writer

The campus radio station is attempting to gain publicity and a wider audience by working with a local area distributor in promoting what it considers to be the last two performances of a local band. WMBB and Briggs Incorporated, a Bangor beverage distributor, have been working together to promote the performances of Carol and the Charmers, at the Station's "Live on Air" event.

"Briggs agreed to supply the dollars needed for Moosehead T-shirts and bumper stickers for the live broadcast," WMBB staff member Becky Dagle said. "They also agreed to help distribute the bumper stickers and T-shirts on campus for the band which the first time we've participated in such a promotion," Dagle said.

Dagle said she was excited about the promotion. "I'm glad we were able to provide some money to the band. We're really glad we're able to help out in some way. I hope the band is successful."

Genetic work solving effects of disease
by Hope Kerley Staff Writer

"Genetic research is consistently making progress in solving the numerous disease-related problems affecting everyone," said the director of the Eastern Maine Medical Center's genetic program said Sunday afternoon in the Stanton Lounge of the Memorial Union. "Our goal is to look directly at the DNA and its chromosomes," he said.

The new recombinant-DNA screening process, Beauregard said, can verify whether or not an individual carries a genetically transmitted disease, identify those couples that are at high risk for passing a disease on to children, and help a physician make a more accurate prognosis of such diseases.

Beauregard said about 3,000 genetically transmitted diseases exist, and that phenylketonuria affects one in 5,000 Maine births. Beauregard, who is a specialist in chromosomal abnormalities in connection with childhood leukemia, said, "My lab is working on using specific chromosomal abnormalities and identifying the types and courses of leukemia and certain chromosomal abnormalities in connection with the patient's outlook or prognosis." "I think this field has great promise in eventually unraveling diseases like cancer and leukemia," Beauregard said. "Right now, all around the country are working with recombinant DNA to identify oncogenes, genes which may be responsible for malignant growths in the body."

Beauregard said another example of the effects of genetics on society was the eugenic movement that began in the 1920s and 30s and culminated during the Nazi Germany era. The movement sought to create the ideal societal population by preventing the reproduction of undesirable individuals and by sterilizing retarded individuals.

"Now, we're in the eugenic stage instead of the eugenic," Beauregard said. "Euthenics deals with an individual's phenotype, or genetic makeup, instead of how the individual influences the population."

"We are now able to provide individuals with defective genes with a management system for life through prenatal and neonatal genetic screening. That means that carriers of diseases like thalassemia sickle cell anemia, or Tay-Sachs Disease can be told with greater accuracy (of) their chances of passing on these diseases to their offspring. And, people afflicted with phenylketonuria can manage the disease and live relative (see GENES page 2)
Orono residents want donation of woodland

by Kelly Mullins
Staff Writer

Local residents voiced their approval to aegy donation of land that will be designated as a wilderness park at an Orono planning board meeting Wednesday, Feb. 27, in the Keith Anderson Community Center.

The planning board will pass the recommendation on to the town council’s next meeting.

Approximately 48 acres of wooded land located off Mainwood Avenue and Gilbert Street have been donated to Orono by David Sklar in memory of his father, Ben Sklar.

Kenneth Hancock, director of Orono Parks and Recreation said hiking, nature and cross-country ski trails will be the extent of any recreational development.

Active recreational facilities such as playing fields and tennis courts will not be constructed. He said Orono residents may use the facilities located at the high school and at the UMO campus.

All trail development will be done by volunteer service groups such as the Boy Scouts, he said.

Clair Ackroyd, a member of the Orono Conservation Commission, said the group would be willing to act as an overseer to the park.

The volunteer organizations would work with Orono Parks and Recreation to help establish management plans, to make sure goals are met and to see that the park is not misused, she said.

The Orono panel has requested the right to allow future access through the property, if necessary.

The present land proposal allows for a single right-of-way going north to south. Ackroyd said she is opposed to a road being established in the park. She said the road should be kept as a nature preserve without the possibility of vehicles.

Genes

Beauregard said most states require neonatal screening for genetically transmitted diseases, and that all newborns in Maine hospitals must be screened for phenylketonuria, hypothyroid disease, galactosemia, tyrosinosis, homocystinuria and maple syrup urine disease. All of the diseases are treatable through lifetime management, if they are detected early enough, he said, but an overall result in some degree of mental retardation if they are not.

Although the carrier of a disease exhibits no visible symptoms, he can be affected in other ways once he is screened and known to be a carrier. Beauregard said.

Carriers of sick cell anemia were denied admission to the United States Air Force Academy and have also been denied insurance on the grounds that they were carriers of a genetically transmitted disease, he said.

Correction

In The Daily Maine Campus article of Wednesday, March 6, entitled “Accidental fire started with lit cigarette,” it was incorrectly reported that both Stephen Cunningham and Stephen Lawrence said they set their room on fire. Actually, Cunningham and Stan Supper, also of Chadbourne Hall, set the toilet paper in the room on fire. Cunningham and Lawrence are roommates, but Lawrence did not speak with the reporter. He did not set the toilet paper on fire nor hang toilet paper around the room.

The Campus regrets the error.

U.S. drug agent found murdered in Mexico

WASHINGTON (AP) — President Reagan vetoed a farm credit-relief package Wednesday, calling it a "massive new bailout that would add billions to the deficit" without really helping farmers.

Warning Congress not to send him any more of what he considers irresponsible spending bills, Reagan vowed to "vote again and again until spending is brought under control.

"For an administration that has added the Pentagon $14 billion and the Department of Education $4 billion since January," Reagan said, "it is right for them to be out in the cold." 

"No one has been killed in the attacks on abortion facilities," Scheidler said. "But thousands of human lives have been destroyed inside these buildings every day."

Most leading anti-abortion organizations, including the National Right to Life Committee, have publicly condemned the bombing of abortion clinics, but encouraging picketing outside the facilities.

Commercial liberty

In a unanimous decision, the editorial board of The Daily Maine Campus voted to oppose a recent Senate subcommittee's bid for a bill to ban beer and wine advertising on television and radio. The board believes a ban on advertising will not effectively address the social problems involving alcohol, and that prohibition of advertising rights involving a legitimate product goes against the First Amendment.

On Feb. 7, Sen. Paula Hawkins, R-Fla., convened her Senate Subcommittee on Alcohol and Drug Abuse to begin hearings on the suitability of advertising beer and wine on television and radio. Although Hawkins has stressed her neutrality on the issue, her statement announcing the hearings contained a number of comments of issue.

She said that past hearings with young, recovering drug addicts, testimony described a progression from addiction to alcohol and that alcohol consumption was glamorized in the media. Hawkins asked, "Are children influenced when they see star athletes tell them to drink beer?"

The subcommittee is viewing other allegations that link advertising of alcohol to alcoholism and deaths caused by drunken driving.

The proposed ban is an emotional issue that is in danger of misinterpretation by a Congress that fears a no vote will lose their constituents wondering if they support alcohol abuse.

The serious problems of alcoholism and the menace of drunken driving are not being solved by taking advertisements off television and radio and refineries and politizing the issue. These problems can only be solved by sustained counseling and education on alcoholism in the schools and at home. Furthermore, the broadcast industry has acted responsibly by devoting many hours of airtime to inform the public of the hazards of alcohol abuse. A National Association of Broadcasters-sponsored survey showed that broadcasters contributed significantly in programming to prevent drunken driving and alcohol misuse.

In response to Hawkins' charges of alcohol linkage to role models, representatives of beer companies say there is no evidence that their advertising encourages anyone to drink alcohol. They state their approach is one that appeals to brand preference. Consumption must not be confused with abuse.

Broadcast and advertising industries point to four countries - Norway, Sweden, China and Russia, as examples where no relationship between advertising and abuse of alcohol exists. Each of these countries has no advertising of this nature, and their problems of abuse are greater than those of the United States. In England, where alcohol advertising has been banned for 14 years, the consumption of alcohol has increased.

Alcohol is a legitimate product and there is severe danger to the broadcast and advertising industry's First Amendment rights of commercial free speech. These hearings are another example of government intervention that tampers with the freedom of choice. As one advertising executive pointed out, "Cars kill people. Should we ban automobile advertising? Some additives in food aren't nutritious. Should advertising be banned for this industry, also?"

We shall ban alcohol from advertising on TV, radio or in magazines. We could remove the word alcohol from an automobile. We should be allowed to age with some dignity. What about the future generations? Is it true that they have made their contribution to society and should reap the harvest of that investment? Consider this, if it weren't for them, there wouldn't be you. In my opinion, this is a terrible injustice coming from a warped belief that all members of this society must "tighten up and live more economically."

It's just as easy to say something like that about financial aid for students. There is no rule stating a student must complete his education in four years. There is plenty of time for him or her to take a semester or even one year off to earn funding for education.

However, the elderly do not have the means or the ability to take time off from needing medical attention. There is no way an older gentleman needing kidney dialysis can wait on tables until he has the money for the treatment. There isn't anyone that I know of to postpone arthritis or cataracts. I have read that in the process of life, there are four cycles and one of them is decay. In a time like this, help is needed and compassion is required. I put forth that the elderly should be allowed to age with some degree of pride and security. I shudder to think of my own children being able to finance their next trip to the doctors.

I guess the bottom line is this ... the elderly are a very important part of society. They have not always had the past. If anyone in this country deserves some respect, it is them. I think we owe it to them to guarantee them the medical needs will always be taken care of. They do deserve that peace of mind.

E.J. VONGHER
Respecting your elders

In most societies, the aged are viewed with a certain amount of respect. Some might even call it reverence. I know my associates in my grandfather are ones of great admiration and deference, I realize these are highly emotional feelings, rooted somehow between fact and fantasy, but they still exist. These feelings prompt me to feel nothing but disinterest for any actions taken by any person or institution which might result in the maltreatment of my grandfather, or anyone else's grandfather (or grandmother) for that matter.

The proposed federal budget for 1986 calls for three changes in the Medicare program which seem to indicate a great change in the philosophy of this nation. The changes are increasing one of the monthly premiums (especially the Part B premium), freezing hospital and doctor fees and the imposition of a $4.80 charge for home health service after the 20th visit.

An article in Wednesday's Boston Globe pointed out that basic Medicare, originally designed to cover about 70 percent of the cost of health care for the elderly members of this country, now provides less than 44 percent. In addition, the government's contribution to the Medicare pie is growing less and less.

It appears that those who helped develop the budget proposal are the elderly citizens of this nation, like the rest of us, are going to suffer while we try to get the deficit under control.

Whatever happened to respect for the elderly? Isn't it true that they have made their contribution to society and should reap the harvest of that investment? Consider this, if it weren't for them, there wouldn't be you. In my opinion, this is a terrible injustice.

The changes involve increasing one of the monthly premiums (especially the Part B premium), freezing hospital and doctor fees and the imposition of a $4.80 charge for home health service after the 20th visit.

The United States is a great country and it prides itself on being a nation of liberty. However, it seems to be making an ideological change. The government is becoming more and more in the control of us. The government is taking over more and more of our lives. The government is becoming more and more of a dictatorship.

It appears that those who helped develop the budget proposal are the elderly citizens of this nation, like the rest of us, are going to suffer while we try to get the deficit under control.

Whatever happened to respect for the elderly? Isn't it true that they have made their contribution to society and should reap the harvest of that investment? Consider this, if it weren't for them, there wouldn't be you. In my opinion, this is a terrible injustice.

Response

Bumstock planning needs input

To the editor:

It's time to plan Bumstock! As you know, there has generally
been much controversy surrounding this event, and the one
planned for this spring is no ex-
teption. There are still many
questions left to be answered,
and we at the Off-Campus Board would like to think some-
student input as possible in
answering them.

It seems that there will be a
Bumstock; the tentative date for
the event is May 27. Furthermore,
we assume the event will be
held on the same location for the
second year in a row.

The Off-Campus Board is
hoping to make this event more
popular and enjoyable for all par-
ticipants. If you have any questions about Bumstock, feel free
to contact the Off-Campus Board.

When writing

The Maine Campus welcomes letters to the editor and comments. Letters should be 300 words or less, and comments should be about 450 words. Anony-
mous letters or comments will be published only if signed.

Editor's Note:

The editor of this letter is...
Boston U., Bears tangle in playoffs

The seventh-seeded Black Bears, for the first time since Starch of 1981 that the team won back-to-back road games in league play, will be the first time since March of 1980 that Maine is involved in playoff action.

On the other hand, BU has won four ECAC titles and in 1980 was the NCAA national champions. Last season, the Terriers finished second to RPI in the ECAC and advanced to the NCAA quarterfinals, where they lost to the eventual national champion - Bowling Green State Universities.

The Terriers are 12-2-2 in their last 14 games, with single losses coming against Providence and Northeastern Universities. In that stretch, BU took two games from Michigan Tech University, Northeastern and the University of Lowell, three from Maine, and single wins against the University of New Hampshire and Harvard University.

Here's how the teams match up by position:

**Offense** - Both the Terriers and the Bears feature a red hot line coming into the playoffs. BU is powered by its Clark Donaldson-John Gallen-Ed Lowery line. Since the trio has been placed together, BU has a record of 13-2-2. Cullen, a sophomore center, is the team's leading scorer and ranked fourth in Hockey East scoring with 26 goals and 25 assists for 51 points in 35 games played. He has scored at least one point in the last 15 consecutive games (12-19-31) and in 22 of the last 23 games (20-24-44). Donaldson has notched 12 goals while adding 17 assists and Lowery has scored 15 goals with 18 assists. Combined, the line has scored 53 goals with 62 assists for 115 points.

The Black Bears' No. 1 line of late has been that of Ron Hellen-Pete Maher-Ray Jacques. The line accounted for all five of the Maine goals in Saturday's 5-1 win against Providence and applied offensive pressure in Sunday's game, while scoring one goal in the 4-3 victory.

Jacques is the line's and the team's leading scorer with 14 goals and 28 assists. Hellen is second in team scoring with 17 goals, 20 assists and Maher is fourth with 10 goals and 15 assists for 25 points. Combined, the line has produced 41 goals and 63 assists for 104 points.

Another line the Terriers have must be putting the puck in the net is the Ray Mallet-Jeff Seve-Chris Jacques. The line accounted for all five of the Maine goals in Saturday's 5-1 win over Providence and applied offensive pressure in Sunday's game, while scoring one goal in the 4-3 victory.

Jacques is the line's and the team's leading scorer with 14 goals and 28 assists. Hellen is second in team scoring with 17 goals, 20 assists and Maher is fourth with 10 goals and 15 assists for 25 points. Combined, the line has produced 41 goals and 63 assists for 104 points.

Another line the Terriers have which is capable of putting the puck in the net is the Ray Mallet-Jeff Seve-Chris Jacques. The line accounted for all five of the Maine goals in Saturday's 5-1 win over Providence and applied offensive pressure in Sunday's game, while scoring one goal in the 4-3 victory.

Jacques is the line's and the team's leading scorer with 14 goals and 28 assists. Hellen is second in team scoring with 17 goals, 20 assists and Maher is fourth with 10 goals and 15 assists for 25 points. Combined, the line has produced 41 goals and 63 assists for 104 points.

Playoffs

The Maine counter with Rene Comeau and Deane, Brad MacGregor and Kevin Delorey, who have produced a goals.

The strengths of the Terriers defense. The team's leading scorer is scoring 1.6 points. Sophomore Bob Deraney, a 6-foot-4, 220-pound right-wing, has scored 15 points.

Goaltending — Because of injuries, the Terriers have used three goalies throughout the season. The team's No. 1 goalie was sophomore Terry Tadler, who was forced to the sidelines during the season with a separated shoulder. Tadler managed to play in 12 games posting a 2.93 goals allowed average (GAA) with a 90 save percentage.

Special teams — The power play, the Terriers have scored on 20 percent of their chances, while their opponents have scored on 23 percent.

The Black Bears have been successful on 15 percent of their power plays, while their opponents have scored on 30 percent.

Red Sox pitcher refuses to blame bad luck

WINTER HAVEN, Fla. (AP) — He could cry "bad luck" and few would blame him if Bruce Hurst has had any luck it's been bad.

But the veteran left-hander refuses to make any excuses for a pair of 12-12 records with the Boston Red Sox the last two years.

"Luck is a dirty word," Hurst said Monday after another workout in the Boston training camp at Chain O'Lakes Park.

"I just don't believe in luck, good or bad," he explained. "I don't think I've been the victim of bad luck. There's no such thing.

"You've got to go out and overcome adversity in this game. You've got to go out there, work hard and do your job. Injuries? Error? They're not bad luck. They're part of the game."

A first-round draft pick out of high school in St. George, Utah, in 1976, Hurst still is chasing the seemingly unrealistic goal set by the Boston staff in his second try in 1982.

"I've overcame frustration that nearly forced him to quit baseball and left elbow surgery to win a regular spot in the Boston staff in his second try in 1982.

"If Bruce Hurst can stay healthy, there's no reason he can't put together six good months," says Boston General Manager Lou Gorman. "If he does, he'll win 20 games easily."

"This could be his year," says new manager John McNamara. "He has all the tools, the good stuff, and looks as if he's got a lot more confidence."

"He's been throwing good, outstanding," said new pitching coach Bill Fischer. "He has command of all his pitches and some of the best curveballs in baseball."

Swinging Away

Rick Lawes

Tuesday in Miami Beach, Fla., it was 78 degrees, with lots of sunshine and clear blue skies. Tuesday, in Orono, Maine, it was 23 degrees, overcast, and nearly a foot of snow on the ground.

On Tuesday, the University of Miami practiced on a field that measured 330 feet down each foul line, 410 to straightaway center. That same day, about 3,000 miles north, their opponent of three days hence practiced on a field measuring about 100 feet down the left field line, 140 to center, and a mere 95 feet down the right field line.

Friday, at about 7 a.m., the UMO baseball team will board a bus, arriving at the Portland International Jetport around 9:30, where they will jump on a plane for Florida's east coast, arriving in Miami about 4:30, Friday afternoon.

At 7:30 p.m., under the lights at the University of Miami's Mark Light Stadium, freshman left fielder Gary Lapierre will step into the batter's box to face the Hurricanes' Steffen Mahaney.

Frank Gonyar, Winkin's pitching coach, said this week that the UMO pitching staff is up to the task. Gonyar's been with Winkin since 1979, and his record as a pitcher has been a success. He has been responsible for the development of many of the current UMO players.

That same day, about 3,000 miles north, their opponent of three days hence practiced on a field measuring about 100 feet down the left field line, 140 to center, and a mere 95 feet down the right field line.

Friday, at about 7 a.m., the UMO baseball team will board a bus, arriving at the Portland International Jetport around 9:30, where they will jump on a plane for Florida's east coast, arriving in Miami about 4:30, Friday afternoon.

At 7:30 p.m., under the lights at the University of Miami's Mark Light Stadium, freshman left fielder Gary Lapierre will step into the batter's box to face the Hurricanes' Steffen Mahaney.

Frank Gonyar, Winkin's pitching coach, said this week that the UMO pitching staff is up to the task. Gonyar's been with Winkin since 1979, and his record as a pitcher has been a success. He has been responsible for the development of many of the current UMO players.
