All joints in earthen or cement pipes must be uniformly and completely filled with best hydraulic cement, none of which must be forced into the pipe, to obstruct its caliber, and in iron pipe either calked with lead or have screw joints.

SECTION 15. The house drain, from a point at least five feet outside the cellar wall and for such distance as same may be covered with earth or concrete, shall be of extra heavy cast iron pipe, at least four inches in diameter and of uniform thickness, free from holes and cracks and with tight calked leaded joints (unless wrought iron pipe with screw joints is used); this pipe shall not be subjected to pressure when passing through the wall and shall extend by the most direct course to receive the fittings to at least two feet above the roof of the building, undiminished in size, and its top shall not be obstructed by any hood or cowl, but may have a wire basket on its top; if in an addition or ell, its height must have a safe relation to the roof of the main house.

Above the basement floor standard pipe may be used. All horizontal portions shall have a fall of at least one-quarter inch to the foot, and more if practicable; shall be firmly ironed or secured to the cellar walls, suspended from or laid on floor timbers unless this is impracticable, in which case they may be laid in a brick or cemented trench in the cellar bottom. Vent pipes for water-closet traps must be of not less than two inch bore for thirty feet or less, and of three inch bore for more than thirty feet. No trap vent pipe shall be used as a soil or waste pipe. All vent pipes must have a continuous pitch, to prevent collecting water by condensation. Drip or overflow pipes from safes under fixtures or from tanks shall be run into some open place where they can be seen, and in no case connected with a soil or waste pipe.

SECTION 17. No ventilator for sewer, soil or waste pipe, trap or drain shall be constructed of brick, sheet metal or earthen ware, nor shall any chimney flue be used for such ventilator. Rain water leaders, when connected with soil or drain pipes, shall be of iron through the outside wall, connected with deep sealed trap, with clean-out on house side. All surface drainage shall be connected with deep sealed traps. All sub-soil drains shall have a trap outside the cellar wall and connect with drain or sewer at least five feet outside of said wall.

SECTION 18. Every water-closet must be supplied with water from a tank or cistern, and the flushing pipe shall not be of less than one and one-quarter inches inside diameter. No pan closet will be allowed, nor shall any closet be flushed

Three inch....	9½ pounds
Four inch.....	13 pounds
Five inch.....	17 pounds
Six inch.....	20 pounds

All joints in cast iron drain, soil, waste and vent pipes shall be run with hot lead resting upon a gasket of oakum and calked gas tight. The amount of lead required is about twelve ounces to each inch of diameter of pipe.

SECTION 20. The test mentioned in Section 9 shall be applied by the plumber closing all openings in soil, drain, waste and vent pipes, and filling the system with water to its top, in the presence of the Board or its duly accredited Inspector, and after all connections are made and the water admitted to fill the traps, either the "Peppermint," "Ether" or "Smoke" test shall be applied by the Board or its Inspector. If any leaky pipe is found it must be replaced by new, and any leaky joints must be made tight.

SECTION 21. All connections of lead with iron pipes must be made with a brass sleeve or ferrule of the same size as the lead pipe, and securely fastened to it by a wiped or overcast joint, and to the iron by a lead-calked joint. All connections of lead waste pipes and vent pipes shall be made by means of wiped joints.

SECTION 22. The waste pipe from refrigerators shall in no case be directly connected with any soil pipe or waste pipe, drain or sewer, nor shall rain water leaders be used as soil, waste or vent pipes. No steam exhaust, blow off or drip pipe from a steam boiler shall connect with any drain, soil or waste pipe without the intervention of a condensation tank.

SECTION 23. No waste pipe from bowl or bathtub shall be connected with water-closet trap, nor shall any bathtub pipe be connected with a waste pipe from a washbowl or sink.

SECTION 24. Whenever a house sewer or drain is obstructed with tree roots or is found broken or defective, so that sewerage or drainage escapes therefrom into the surrounding soil or into adjacent premises, the Inspector of Plumbing shall condemn such sewer and order its repair or replacement.

If the defective sewer be of terra cotta, he may direct its replacement with cast iron within four feet outside of building.

Whenever a pipe, joint, plumbing fixture or appurtenance of a system of plumbing is broken, defective or inoperative, its repair or replacement may be ordered by the Inspector of Plumbing with the approval of the Board of Health.

Any order or notice issued under the provisions of this section shall be promptly complied with by the person responsible.

House sewers and house drains must, where possible, be given an even grade to the main sewer of not less than one-quarter of an inch per foot.

SECTION 25. If the public sewer be a pipe sewer having a diameter of twelve (12) inches or more, the plumber, under direction of the Commissioner, or any authorized employee of the city, shall cut a hole of the least practicable size in the public sewer, and the connection shall be made by means of a connecting thimble of the same size and material as the house sewer; of such length that the hub shoulder thereof shall rest against the outer surface of the sewer and no portion extend within it.

SECTION 26. No water-closet except those placed in yards shall be allowed without a flushing tank, flushometer, volumeter or similar device, which shall be supplied directly from the supply pipes.

All water-closets must have flushing rim-bowls.

SECTION 28. Pan, plunger or hopper closets will not be permitted in any building. No range closet, either wet or dry, nor any evaporating system of closets, shall be constructed or allowed inside of any building.

A separate building, constructed especially for the purpose, must be provided in which such range closets shall be set.

SECTION 29. All extensions of existing plumbing shall be made in conformity to these regulations. All repairs and alterations of existing plumbing shall conform as nearly as practicable to these regulations.

SECTION 30. No waste pipe from a refrigerator or other receptacle in which provisions are stored shall be connected with any drain, soil or other waste pipe. Such waste pipes

shall be so arranged as to admit of frequent flushing, and shall be as short as possible in direction to trap or open fixtures.

SECTION 31. Safe waste pipes shall not be connected directly to any part of the plumbing system or so maintained.

SECTION 32. No person shall locate, or cause to be located, any water-closet in any sleeping-room, or in any room, apartment, or vault which is not in direct communication with the external air or vertical air shaft by means of a window or air space having an area of at least four (4) square feet for the admission of light and fresh air.

SECTION 33. Means shall be provided for thoroughly flushing all soil-pipes, drain pipes, water-closets and urinals. A copper-lined flushing tank of adequate size, provided with a flush pipe not less than one and one-quarter (1 1/4) inches in diameter shall be supplied for every water-closet and such tank shall not be used for any other purpose.

Pan, valve, plunger or offset water-closet shall not be installed, nor shall such water-closet now in use be maintained if complaint is made by any occupant of the building in which it is located.

When a bowl, or trap, of either type of closet above mentioned, or of a straight or oval hopper closet, within a building is defective such portion may not be replaced, but an approved closet shall be substituted for the old fixture.

A straight or oval hopper closet shall not be installed within a building except upon the approval of the Inspector of Plumbing, in locations where the exposure to frost will not justify the use of a trap above the floor.

A straight hopper closet may be condemned by the Inspector of Plumbing upon complaint if located in a building which has been constructed twelve years or more, and shall then be replaced by a short hopper closet of approved type.

Whenever a water-closet of prohibited type is replaced the reconstruction of adjacent small fixtures, wastes and vents required to bring them into reasonable conformity to these regulations shall also be performed, and the soil stack also extended above the roof level.

Pipes of this kind shall be kept above ground, if practicable. When wrought iron vent pipes are used they shall be of galvanized iron provided with galvanized fittings. No cast iron vent pipes shall be of less diameter than three (3) inches.

The Inspector of Plumbing may, with the approval of the Secretary of the Board of Health, authorize the placing of small vent pipes outside of old buildings in cases where it is considered inadvisable to locate them within the building. Any vertical line of leader, soil or waste pipe over fifty feet in height must be of extra heavy cast iron pipe.

All vertical soil pipe must extend full size through roof. Vent soil pipes shall extend two feet above roof. When within four feet of any window or opening it shall then be placed one foot above either window or opening.

SECTION 37. At the base of all soil stacks or pipes there shall be placed a "plain tee fitting" to insert testing plug. After work is tested and tee removed, either a clean-out or a cast iron plug must be used to close opening.

SECTION 38. Every soil and waste pipe shall have a slope or incline of at least one (1) in forty-eight (48), and vent pipes, where not vertical, shall have a continuous slope.

In no such line shall be run unnecessary bends or offsets, and, where changes of direction are unavoidable, they shall be made with bends of not more than forty-five (45) degrees, if practicable.

No air inlet shall be laid without the best obtainable slope, and in a manner to avoid unnecessary length and bends.

SIZES OF SOIL AND WASTE.

The sizes of soil and waste pipes must not be less than those set forth in the following table :

Horizontal lines are to be increased as fixtures are added, but verticals throughout their entire length are to have the diameter given for the total number of fixtures which discharge through them.

<i>Horizontal Runs.</i>	<i>No. of Water-Closets.</i>

Small fixtures in number not to exceed twice the number of water-closets may discharge into the lines above specified without increasing their size.

When the small fixtures exceed in number this ratio four other fixtures shall be connected equal to one water-closet.

SECTION 39. Deviations and variations from these rules will be allowed when desired only when in the opinion of the Board they will not be liable to become a source of danger to the public health.
