About UMSpaceSafe

UMSafeSpace is a tool to document research space use for the purpose of managing and mitigating hazards, including potential COVID-19 exposure. All UMaine/UMM faculty, staff, and students conducting institutionally associated research are required to use this tool when accessing and departing research associated spaces on and off campus, including campus labs, research common areas, field sites, farms, and non-UMaine/UMM research centers.

UMSafeSpace does not passively track your activities and is not intended for documenting space use outside of institutionally authorized research activities.

Space use data is stored in a secure database and accessible only to UMSafeSpace administrators for the purpose of assessing and managing research safety, unless otherwise anonymized.

Your identity and contact information may be shared with institutional emergency responders (e.g., COVID-19 response teams) or state/federal emergency responders (e.g., Maine CDC, law enforcement) where deemed necessary to ensure personnel and public safety (e.g., exposure tracing).

UMSafeSpace does not guarantee against infection by COVID-19 or other workplace hazards.
