Welcome to Day 5 of the COVID-19 Misinformation Challenge!

This week, we've evaluated [social media posts](#), [treatment options](#), [doctors' credentials](#), and [news stories](#) related to COVID-19. We'll finish the week with some of the science behind the virus.

Today's Challenge: Determine the Reliability of Research Published about COVID-19

This is the final challenge, and a tough one, but we know you're up for it! You may have seen studies making various claims about COVID-19. Some hold up under scrutiny, some are iffy (and controversial), and others have been refuted.

Let's Finish Strong with Day 5: Science or Science Fiction! [Follow this link to determine which studies are valid, controversial, or discredited](#).

Please Note

You will receive a brief evaluation of the COVID-19 Misinformation Challenge this afternoon, Friday, 5/29. It should only take a couple of minutes to complete. I hope you won't hesitate to share your experience with this program, even if you were unable to participate in all of the tasks.

Thank you for joining the COVID-19 Misinformation Challenge!

Wishing you a lovely summer,

Jen Bonnet
